3 August 2021

**Paper 1**

2 hours

Write your name, class and index number in the spaces at the top of this page.

Write in dark blue or black pen.

You may use an HB pencil for any diagrams or graphs.

Do not use staples, paper clips, glue or correction fluid.

Answer **all** questions.

If working is needed for any question, it must be shown with the answer.

Omission of essential working will result in loss of marks.

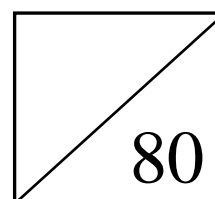

The use of an approved scientific calculator is expected, where appropriate.

If the degree of accuracy is not specified in the question, and if the answer is not exact, give the answer to three significant figures. Give your answer in degrees to one decimal place.

For  $\pi$ , use either your calculator value or 3.142, unless the question requires the answer in terms of  $\pi$ .

The number of marks is given in brackets [ ] at the end of each question or part question.

The total number of marks for this paper is 80.

1	220:27:18	13b	2, -4
2	$\frac{7}{50}$	14a	It is not clear if the <b>height or the area</b> of the image is used to determine the mass of food waste collected.
3	$\frac{8}{3}$ or $2\frac{2}{3}$	14b	The height and the area of the image is not proportional. The readers may think that there is <b>more</b> than 100 million tonnes increase in mass from 1960-2000.
4	$-4a^2 + 12ab - 4b^2$	15a	5
5	$\frac{1}{(x+2)}$	15b	The mean is not appropriate as there is an outlier (21 mark) which will decrease/affect the mean /skew the mean value.
6	$-2 \leq x < 8\frac{1}{3}$	16a	15.8
7	-1	16b	$y = -\frac{1}{3}x + 25$

10a	$\frac{125}{6}, \frac{180}{7}$	18a	$\frac{5}{12}$
10b	$\frac{5n^2}{n+1}$	18b	$-\frac{5}{13}$
10c	$71\frac{3}{16} = \frac{1139}{16}$ , since 1139 is not a multiple of 5, $71\frac{3}{16}$ cannot be a term	18c	$\frac{11}{16}$
11	$\text{£}1 = \$1.86$ $\text{€}1 = \frac{1}{0.62} = \$1.61$ Since it costs less to buy €1 compared to £1, it would be cheaper to go on the tour in Paris.	19	11.8
12ai	$2^4 \times 3^2 \times 7$	20a	5.55
12aii	$p = 12, q = 7$	20b	61.1%

13ai	$5 - (x+1)^2$	21aii	\$42
13aii	The maximum value of $4 - 2x - x^2 = 5$ , hence there are no solution of $x$ when $4 - 2x - x^2 = 6$ .	21aiii	7.5

21bi	I <u>DISAGREE</u> because <u>residents in Block W has a higher median expenditure (\$44) than the residents in Block K (\$34)</u>
21bii	I <u>AGREE</u> because <u>the interquartile range of Block K (\$36) is lower than the interquartile range Block W (\$42) showing that the data is less widely spread than Block W's</u>
22ai	6.67
22aia	225

23a	$\angle OCA = \angle OAC$ (base $\angle$ of isos. $\Delta$ ) $= \frac{180^\circ - 140^\circ}{2}$ $= 20^\circ$ $\angle BCA = \angle OAC$ (alt. $\angle$ s) or $\angle BCA = 180^\circ - 140^\circ - 20^\circ$ (int. $\angle$ ) $= 20^\circ$ Since $\angle OCA = \angle BCA = 20^\circ$ , $CA$ bisects $\angle BCO$ .
23bi	50
23bii	48
23c	ext. $\angle$ of polygon $\angle PAD = 48^\circ$ $\text{no. of sides} = \frac{360}{48} = 7.5$ Since the number of sides is not an integer, $QADR$ is not a regular polygon Hence I disagree with Lizzy.
